

CREDIT CARD WEEKLY STATUS REPORT

Project Objective

To develop a comprehensive credit card weekly dashboard that provides real-time insights into revenue performance, customer behavior, and transaction trends to support data-driven business decisions.

Data Preparation & Modeling

Data Ingestion

- Prepared and validated CSV files
- Created relational tables in SQL database
- Loaded transactional and customer datasets into Power BI

DAX Calculations

Custom DAX measures were created to segment customers by age and income groups, calculate revenue, and compare weekly performance.

Key Performance Indicators

- Total Revenue: 55M
- Transaction Amount: 45M
- Transaction Count: 657K
- Total Interest Earned: 7.9M

Revenue & Transaction Analysis

The dashboard provides quarterly revenue and transaction trends (Q1–Q4) and detailed breakdowns by card category, payment method, expenditure type, and customer attributes such as job role, education, and income group.

Key Insights

Overall Performance

The business generated 55M revenue from 657K transactions, indicating high transaction volume with moderate ticket size. Interest income (7.9M) serves as a strong secondary revenue stream, particularly from premium cardholders.

Card Category Insights

Blue cards dominate revenue (~46M), while Gold and Platinum cards contribute fewer transactions but higher-value customers. This highlights an opportunity to upsell customers into premium card tiers.

Quarterly Trends

Revenue remains stable across quarters (~13–14M). Transaction volume peaks in Q3, suggesting seasonal demand or promotional effectiveness.

Payment Method Behavior

Swipe transactions dominate (35M), followed by Chip (17M) and Online (3M). Low online usage suggests an opportunity to drive digital adoption.

Customer & Demographic Insights

Middle-aged customers (40–60), businessmen, white-collar professionals, graduates, married individuals, and customers with 2–3 dependents generate the highest revenue. High-income customers contribute the most revenue (22M), with strong geographic concentration in TX, CA, and NY.

Business Conclusion

The analysis highlights stable revenue performance with clear opportunities to increase profitability through premium card adoption, digital payment promotion, and targeted campaigns focused on high-value customer segments.
